

BULLETPROOF®

FORAGE TREATMENTS

CUSTOMER TESTIMONIAL

“We had applied Bulletproof® to some of our millet hay back in 2018 that was baled at 23% moisture. My neighbor jokingly asked if I was going to disc around the bales so that when they started burning, they wouldn’t start a prairie fire. Today, the bales have some greenness and no sign of mold. It has stored well, and the cows are still eating it. I also used Bulletproof on our silage and we haven’t had any spoilage throughout the pile.

I WILL NOT PUT SILAGE UP WITHOUT USING BULLETPROOF AND WILL UTILIZE IT ON HAY WHEN NEEDED.”
